

MAGNESIUM 6.00%

Nutrient

PRODUCT INFORMATION

Dyna-Gro Magnesium is a concentrated aqueous solution that combines high solubility with convenience of both aerial and ground application. It is designed for addition to soluble X-O-X grade fertilizers and will provide one of the *highest solubilities* available. Since Dyna-Gro Magnesium is easily assimilated by both leaves and woody tissues, it is very effective as a foliar spray to *prevent* and *correct* magnesium deficiencies on fruit and other crops. Dyna-Gro Magnesium when added to a spray tank before other materials at rates of 1 quart per 500 gallons of water, will lower pH of 7.4 to approximately 6.0 pH. It is *important* that a non-ionic surfactant be added to aid in surface coverage which helps leaf absorption.

CROP RECOMMENDATIONS

Fruit and Nuts: Citrus, avocados, mangos, pecans; MATURE TREES: Apply 1-4 quarts per acre in enough water to cover. Repeat application if desired at 1-2 quarts per acre in summer and fall applications. YOUNG TREES: Apply 2 quarts per 100 gallons of water and wet thoroughly. Applications every 6-8 weeks throughout growing season have given excellent results. **Do Not Use On Stone Fruit.**

Vegetable Crops: Apply 1-4 pints per acre in enough water to cover.

Field Crops: (Corn, peanuts, soybeans, small grains); Apply 2 to 3 pints per acre in enough water to cover. At least 3 applications are suggested with additional applications being necessary for more severe deficiencies. More frequent applications at the lower rates will give better results.

Turf, Greens, Tees: Apply five (5) to six (6) ounces per 1000 sq. ft. in enough water to cover. Repeat as needed.

Fairways: As supplement to Dolomite apply two (2) to four (4) gallons per acre in enough water to cover.

Directions For Use

Ground Foliar-*Dilute*: use a minimum of 100 gallons of water per acre-*Concentrate*: use a minimum of 20 gallons of water per acre.

Aerial Applications: Do not use without the addition of a non-ionic surfactant, in at least 5 gallons of water per acre. Apply with aircraft equipped with Beco-Mist type nozzles only.

(1) When using less than 50 gallons of water per acre, a non-ionic surfactant at the recommended rate per 100 gallons of water will aid surface coverage and leaf absorption. NOTE: When using with citrus spray oils of the 435 class, surfactants are not needed.

(2) Do not use with liquid foliar or ground fertilizer containing phosphates.

(3) A jar test to check the compatibilities of unfamiliar or new combinations should be performed prior to mixing and application.

(4) A non-ionic surfactant is necessary when using on young trees.
